John Vilela

Senior Software Developer | ReactJs, Javascript, Nodejs, Typescript,
VueJs, CSS

Guaratinguetá, São Paulo, Brazil

Summary

Senior JavaScript/TypeScript developer with 12+ years of experience building web applications, enterprise platforms, internal tools, and business-critical systems. I work mainly with React, Angular, Node.js, Next.js, PostgreSQL, MongoDB, and modern full-stack architectures. My experience includes SaaS products, B2B e-commerce, mobile apps, operational dashboards, automation workflows, and AI-assisted systems. Currently, I work on Embraer's enterprise e-commerce platform for commercial, executive, and defense aviation operations, contributing to backend performance, production support, and AI chatbot initiatives using LLM-based technologies. At Motolink, I was responsible for building a new internal operations platform that replaced an unstable and unreliable legacy system. A few examples of my work:- Optimized SQL queries and backend data flows, reducing report generation time by nearly 40%.- Reduced application costs by 82% by replacing paid API-dependent features with more efficient alternatives.- Improved site loading performance through code and build optimization.- Built and maintained React Native applications used by 10,000+ daily users.- Built internal tools, dashboards, and automation flows to support real-time business operations.- Contributed to AI-assisted workflows using LLMs as practical engineering tools, while keeping software architecture, code quality, and maintainability as the foundation. I'm especially interested in products where technology directly improves operations: internal platforms, SaaS tools, automation, AI-assisted systems, e-commerce, and complex business workflows.

Experience

GSW Software

Full Stack Developer

August 2023 - Present (2 years 10 months)

São Paulo, Brazil

Working on Embraer's enterprise e-commerce platform for commercial, executive, and defense aviation operations.

- Developed and maintained features in a multi-repository MEAN stack environment using Angular, Node.js, Express, MongoDB, and TypeScript/JavaScript.
- Optimized SQL queries and backend data flows to improve performance, reliability, and response times in business-critical operations.
- Acted on the production support team, investigating incidents, performing root-cause analysis, and delivering fixes for live production issues.
- Currently contributing to an AI chatbot project built with modern LLM-based technologies, using Mastra to maintain, evolve, and integrate assistant workflows with internal operational systems.

Freelance

Full-stack Developer

May 2017 - Present (9 years 1 month)

São Paulo, Brazil

- Development of an application with 10,000 daily accesses using React Native technology and integration with Firebase;
- Significant increase in website visits, achieving a growth of 43% through SEO improvements;
- Restructuring of the national system of CBHG (Brazilian Field and Indoor Hockey Confederation), focused on optimizing the overall system speed and reinforcing security, using technologies like Next.js and Postgres.

Levilo

Frontend Developer

September 2020 - June 2023 (2 years 10 months)

Rio de Janeiro, Brazil

- Development, maintenance, and deployment of web and hybrid mobile applications, including requirements gathering, prototyping, UI, and deployment to the App Store and Play Store;
- Optimization of website loading time to 350ms by reducing package size, implementing caches, and adding Lazy Load;
- Reduced application costs by 82% by reevaluating paid API-dependent features;
- Configuration of Staging and Production environments on the Azure platform, along with the development of unit and E2E tests;

- Implementation of CI/CD pipelines using Azure DevOps to streamline the testing, build, and continuous delivery processes.

DUEE BRASIL

Full-stack Developer

August 2018 - June 2020 (1 year 11 months)

São Paulo, Brazil

- Built promotional websites to brands like Starbucks and Faxe beer;
- Implemented internal solutions to streamline company workflow management;
- Collaborated with the design team to create promotional sites;
- Recommended implementing CI/CD for easier management of internal and external projects.

ATLAS INOVAÇÕES

Frontend Developer

May 2017 - July 2018 (1 year 3 months)

Rio de Janeiro, Brazil

- Development and maintenance of web applications using AngularJS;
- Engineered CI/CD pipelines and implementation of Heroku services to automate the testing, building and deploying of applications.

EXLA - Software Estratégico

Frontend Developer

July 2014 - January 2017 (2 years 7 months)

Guaratinguetá, São Paulo, Brazil

- Responsible for the maintenance and development of web and hybrid mobile applications, using technologies such as AngularJS and Ionic;
- Complete management of the requirements gathering, prototyping, and user interface (UI) design stages.

Education

ETEC Prof. Alfredo de Barros Santos

Certificate in Design, Design · (2017 - 2018)

Monsenhor Cicero de Alvarenga

High School · (2014 - 2016)
